

APPENDIX H
ORDINANCE No. 1341

ORDINANCE NO. 1341

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF BONNEY LAKE, PIERCE COUNTY, WASHINGTON, ADOPTING THE 2009 COMPREHENSIVE SEWER PLAN, THE 2008 COMPREHENSIVE WATER PLAN, AND AMENDING THE UTILITIES ELEMENT OF THE COMPREHENSIVE PLAN REFERENCING THESE PLANS.

WHEREAS, on January 20, 2009 the City Council adopted the Planning Commission annual work plan that included consideration of making changes to the Utilities Element of the Comprehensive Plan; and

WHEREAS, a Notice of Public Hearing was issued on August 19, 2009; and

WHEREAS, the Planning Commission conducted a public hearing on September 2, 2009; and

WHEREAS, at the November 4, 2009 Planning Commission meeting the Planning Commission recommended that the City Council adopt the 2009 Comprehensive Sewer Plan and the 2008 Comprehensive Water Plan and update the language in the Utilities Element of the Comprehensive Plan to reference these two plans; and

WHEREAS, SEPA has been complied with via a Determination of Non-Significance issued on September 3, 2009; and

WHEREAS, RCW 36.70A.106 requiring a 60 day review by the Washington State Department of Commerce has been complied with; and

WHEREAS, this is one of three Comprehensive Plan amendments concurrently coming before the City Council; and

WHEREAS, the criteria for amending the Comprehensive Plan set forth in BLMC § 14.140.090 are: 1) the amendments are consistent with the goals and policies of the Comprehensive Plan, 2) the comprehensive plan would remain internally consistent, 3) the amendments are consistent with the Countywide Planning Policies, 4) the amendments are consistent with the Growth Management Act, and 5) the amendments advance the public health, safety, or welfare and are in the best interest of the residents of Bonney Lake; and

WHEREAS, Goal 7-1 of the City's Comprehensive Plan and its implementing policies are intended to ensure sufficient sewer, water, and stormwater service for the City and UGA through the planning horizon and the City's updates of the Water and Sewer Comprehensive Plans help to implement this goal; and

WHEREAS, the proposed amendments make the Comprehensive Plan more internally consistent, and

WHEREAS, adopting the Comprehensive Plan amendment does not violate any of the Countywide Planning Policies or the Growth Management Act, and

WHEREAS, because safety is not effected by the amendment, and public health and welfare are advanced.

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF BONNEY LAKE, WASHINGTON, DO ORDAIN AS FOLLOWS:

Section 1. The City hereby adopts the Comprehensive Sewer Plan prepared by RH2 and dated February, 2009 and the Comprehensive Water Plan prepared by RH2 and dated October, 2008.

Section 2. The “Water” and “Sewer” sections of Page 7-1 of the City’s Comprehensive Plan are amended to read as follows:

Water

The City hereby adopts the City of Bonney Lake Comprehensive Water System Plan, prepared by RH2 and dated ~~March, 2006~~ October, 2008, as part of this Utilities Element. Copies are available at City Hall or the City Hall Annex.

Sewer

The City hereby adopts the City of Bonney Lake Comprehensive Sewer System Plan, prepared by RH2 and dated ~~March, 2006~~ February, 2009, as part of this Utilities Element. Copies are available at City Hall or the City Hall Annex.

Section 3. This Ordinance concerns powers vested solely in the Council, it is not subject to referendum, and shall take effect five (5) days after its passage, approval and publication as required by law

PASSED by the City Council and approved by the Mayor this 22nd day of December, 2009.

Effective Date:

RESOLUTION NO. 1846

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF BONNEY LAKE,
PIERCE COUNTY, WASHINGTON, APPROVING THE 2008 WATER CAPITAL
FACILITIES PLAN.

WHEREAS, the City of Bonney Lake Comprehensive Water System Plan (CWSP) was completed in February 2008; and

WHEREAS, the City Council has reviewed and accepted the CWSP as written; and,

WHEREAS, DOH requires City Council review and approval of the projects contained in the CWSP;

NOW THEREFORE, be it resolved; that the City Council of the City of Bonney Lake, Washington, does hereby approve the 2008 Water Capital Facilities Plan for the 10 and 20 year proposed water system improvements.

PASSED by the City Council this 13th day of May, 2008.

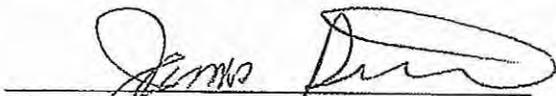

Neil Johnson Jr., Mayor

SEPA CHECKLIST

A. BACKGROUND

1. Name of proposed project, if applicable:

City of Bonney Lake
2008 Comprehensive Sewer System Plan

2. Name of applicant:

City of Bonney Lake

3. Address and phone number of applicant and contact person:

Applicant: John Woodcock, City Engineer
City of Bonney Lake
8720 184th Avenue East
PO Box 7380
Bonney Lake, WA 98390
253-862-8602

Contact: Geoff Dillard, P.E.
RH2 Engineering, Inc.
One Pacific Building
621 Pacific Ave, Ste 104
Tacoma, WA 98402
425-951-5322

4. Date checklist prepared: August 4, 2009

5. Agency requesting checklist:

City of Bonney Lake
Public Works Department

6. Proposed timing or schedule (including phasing, if applicable):

The *Comprehensive Sewer System Plan* is to be approved in 2009. Projects proposed in the *Comprehensive Sewer System Plan* are prioritized for consideration by City officials. Separate projects will be constructed as funding becomes available. The *Comprehensive Sewer System Plan* addresses the policies, design criteria, and recommendations

needed to construct, maintain, and manage a wastewater system for proposed land use development as dictated by the City's and Pierce County's current comprehensive land use plan. The improvements are identified for two planning periods. The primary focus of the plan is improvements that are needed over the next six years. Other improvements are identified through the year 2027.

- 7. Do you have any plans for future additions, or further activity related to or connected with this proposal? If yes, explain.**

Yes, the City plans to supplement or update the *Comprehensive Sewer System Plan*, and all its associated plans, on a regular basis. Any desired changes to these recommendations will require a comprehensive plan amendment. This study recommends that the plan be updated for the year 2013.

- 8. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal.**

Each of the projects listed in the capital improvement program is subject to SEPA regulations. While some projects may be categorically exempt, most will require a Determination of Non-significance (DNS) and some will require either a Mitigated Determination of Non-significance (MDNS) or possibly an Environmental Impact Statement (EIS).

- 9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.**

The coverage area of the City of Bonney Lake's 2008 Comprehensive Sewer System Plan includes the city limits and extends into unincorporated areas of Pierce County. Various governmental applications and proposals are continually ongoing.

- 10. List any government approvals or permits that will be needed for your proposal, if known.**

Approval by the Washington State Department of Health (DOH) is required. Approval by the Bonney Lake City Council and Pierce County is also required.

In addition, implementation of the various physical and programmatic changes included in the *Comprehensive Sewer System Plan* may require approvals from one or more of the following agencies:

- Washington State Department of Health
- Washington State Department of Ecology

- Washington State Department of Transportation
- Washington State Department of Fisheries
- Pierce County

11. **Give a brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do not need to repeat those answers on this page. (Lead agencies may modify this form to include additional specific information on project description.)**

The *2008 Comprehensive Sewer System Plan* covers Bonney Lake Sewer Service Area which is approximately 12 square miles. The plan contains the following material:

- Evaluates the existing sewer system.
- Utilizes growth forecasts to determine future expansion of the existing sewer system.
- Identifies sewer system improvements that resolve existing system deficiencies and accommodate future needs of the system for at least 20 years into the future.
- Prepares a schedule of improvements that meets the goals of the City's financial program.
- Documents the City's operation and maintenance program.
- Complies with all other sewer system plan requirements of the Department of Health.

12. **Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed, including a street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.**

The area covered by this *Comprehensive Sewer System Plan* is the City of Bonney Lake's sewer service area. Service boundaries have been established by agreement and policy, specifically, the 2002 Sanitary Sewer Transfer Agreement between Bonney Lake and Pierce County. Any future boundary changes will be addressed in subsequent updates or amendments to this plan.

B. ENVIRONMENTAL ELEMENTS

1. Earth

- a. **General description of the site (circle one): Flat, rolling, hilly, steep slopes, mountainous, other _____.**

The majority of the sewer service area is the forested plateau around the Lake Tapps Reservoir

b. What is the steepest slope on the site (approximate percent slope)?

The steepest slopes within the service area are along the hillsides descending from the plateau and are in the range of 25 to 30 percent.

c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them and note any prime farmland.

The soils are Alderwood type derived from glaciated areas. These consist of recessional gravels and tills. More specifically, they are characterized as gravelly sandy loams, sandy loams, and compacted gravelly silts. There are small areas of organic (peat) soils in the eastern part of the water service area.

d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

There is no recent history of unstable soils.

e. Describe the purpose, type, and approximate quantities of any filling or grading proposed. Indicate source of fill.

It is anticipated that several of the projects identified in this plan will require grading or filling of a site. When backfilling the trench, native material (that which was removed during excavation) will be used if it meets standards. If the native material is not of appropriate quality, suitable backfill material will be imported. Any importation of backfill material will be addressed in the environmental review during specific project planning phases.

f. Could erosion occur as a result of clearing, construction, or use? If so, generally describe.

Minor erosion during construction of water system projects could occur.

g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or buildings)?

Sewer system projects rarely create impervious surfaces. Typically sewer interceptors, trunk lines and submains are installed in asphalt roadways or on easements where structures are prohibited.

- h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any:**

When projects are developed pursuant to this *Comprehensive Sewer System Plan*, the construction of these projects will meet all erosion control requirements as set forth in the City of Bonney Lake standard plans and Pierce County Stormwater Management Manual or as required by the SEPA process.

2. Air

- a. What types of emissions to the air would result from the proposal (i.e., dust, automobile odors, industrial wood smoke) during construction and when the project is completed? If any, generally describe and give approximate quantities, if known.**

Potential vehicular and equipment emissions may affect the ambient air quality for a short period of time during construction of water system projects. These impacts would be addressed in environmental review during project specific planning phases. No long term emissions will occur.

- b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.**

Potential vehicular emissions may result from the ongoing maintenance of the system by the City. All City vehicles must meet State emissions control requirements including bi-annual emission tests.

- c. Proposed measures to reduce or control emissions or other impacts to air, if any**

When projects are developed pursuant to this *Comprehensive Sewer System Plan*, the construction of those projects will meet all City codes including emissions control.

Water

a. Surface:

- 1) Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river into which it flows.**

The Lake Tapps Reservoir is the largest body of water in the water service area. Bonney Lake, Debra Jane Lake, Fennel Creek (Puyallup River) and numerous small lakes also exist within the service area

- 2) **Will the project require any work over, in or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.**

Any projects identified within this document that are within 200 feet of the described waters will address this issue in the SEPA and Shoreline Permit review of the individual project. All City codes, as well as any outside agency requirements, will be met as provided in the project permit review process.

It is the City's goal to avoid construction in or around wetlands. It is, however, not beyond the scope of possibility that the City will have to do work on lines existing in the vicinity of wetlands or that engineering constraints may leave us few options for new construction. If work is required in or around wetlands, the City will address this issue in the project permit review for that specific project. Reasonable effort will be made to maintain the integrity of, restore, or replace all wetlands areas as required by State and local regulations.

- 3) **Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.**

Any fill and dredge material that may be placed in or removed from surface water or wetlands will be addressed in the project permit review of the individual project. All City codes, as well as any outside agency requirements will be met as provided in the project permit review process.

- 4) **Will the proposal require surface water withdrawals or diversions? Give general description, purpose, and approximate quantities, if known.**

It is not anticipated that there will be any discharge to or withdrawal from surface water.

- 5) **Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.**

Portions of specific projects are located within the 100-year flood plain.

These projects will address this issue in the project permit review of the individual projects. All City codes, as well as any outside agency requirements, will be met as provided in the project review process.

- 6) **Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.**

No waste materials will be discharged to surface.

b. Ground

- 1) **Will ground water be withdrawn, or will water be discharged to ground water? Give general description, purpose, and approximate quantities, if known.**

No groundwater withdraws or discharges are anticipated.

- 2) **Describe waste material that will be discharged into the ground from septic tanks or other sources, if any (for example: domestic sewage; industrial, containing the following chemicals; agricultural; etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.**

Bonney Lake's sewer service area contains numerous residential septic systems. Data regarding existing septic systems is conflicting and unreliable.

c. Water Runoff (including storm water):

- 1) **Describe the source of runoff (including storm water) and method of collection and disposal, if any (including quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.**

In some cases, implementation of the plan would create insignificant additional impervious surfaces (e.g lift stations) that would not alter stormwater runoff patterns. In those cases, the stormwater would be retained and detained consistent with City's and Pierce County's stormwater control requirements.

Any runoff that may occur during construction of the capital improvements projects will be subject to City codes, as well as any

outside agency requirements provided in the SEPA finding.

- 2) Could waste materials enter ground or surface waters? If so, generally describe.

No.

- d. Proposed measures to reduce or control surface ground, and runoff water impacts, if any.

Proposed measures to reduce or control surface, ground, and runoff water impacts will be addressed in the permit review of the individual projects. All City and County codes, as well as any outside agency requirements, will be met as provided in the permit review process.

4. Plants

- a. Check or circle types of vegetation found on the site:

- X deciduous tree: alder, maple, aspen, other
X evergreen tree: fir, cedar, pine, other
X shrubs
X grass
X pasture
X crop or grain
X wet soil plants: cattail, buttercup, bullrush, skunk cabbage, other
X water plants: water lily, eelgrass, milfoil, other
X other types of vegetation

- b. What kind and amount of vegetation will be removed or altered?

It is expected that localized impacts to vegetation could occur as a result of clearing to accommodate construction of project facilities. However, the specific types and amounts of vegetation that may be disturbed cannot be predicted. Since most projects would be within right-of-ways and under streets, minimum amounts of disturbance are expected. Any potential removal or alteration of vegetation will be addressed in the project permit review of the

individual project. All City and County codes will be followed and any necessary removal will be mitigated at the time of application.

- c. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any:

Any potential landscaping, use of native plants, or other measures to preserve or enhance vegetation on site will be addressed in the permit review of the individual project.

- d. List threatened or endangered species known to be on or near the site.

It is currently unknown if threatened or endangered flora exists within the planning area. If there are threatened or endangered species identified on or near the site of any individual project discussed within the plan, the impacts will be considered and discussed during the permit review of that project.

5. Animals

- a. Circle any birds and animals which have been observed on or near the site or are known to be on or near the site:

birds: hawk, heron, eagle, songbirds, other: _____

mammals: deer, bear, elk, beaver, other: _____

fish: bass, salmon, trout, herring, shellfish, other _____

- b. List any threatened or endangered species known to be on or near the site.

None known

- c. Is the site part of a migration route? If so, explain.

The entire region is part of the Pacific flyway for migratory birds. Waterfowl such as Canadian geese and shorebirds stop at wetlands within the sewer service areas during their seasonal migration

- d. Proposed measures to preserve or enhance wildlife, if any.

Any potential measures to preserve or enhance wildlife will be addressed in the permit review of the individual project. All City codes, as well as any outside agency requirements, will be met as provided in the project permit

review process.

6. Energy and Natural Resources

- a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.**

Some facilities, such as lift stations and grinder pumps, will require electrical energy in order to run the pumps and telemetry. Energy used will provide sewer service to residents in the City of Bonney Lake service area.

- b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally explain.**

Proposed project facilities would not cast shadows affecting adjacent or surrounding properties.

- c. What kind of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts, if any:**

All facilities will be constructed utilizing efficient energy use systems that will not affect safety or reliability.

7. Environmental Health

- a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste, that could occur as a result of this proposal? If so, describe.**

There are no environmental health hazards directly associated with the adoption of this *Comprehensive Sewer System Plan*.

- 1) Describe special emergency services that might be required.**

The City's Public Works Department is on call to address any emergencies that may occur. The Public Works Director is responsible for assessing sewer system damage following an earthquake, and for communicating and coordinating repair efforts.

- 2) Proposed measures to reduce or control environmental health hazards, if any:**

The earthquake response plan defines a sewer system seismic response plan and recommends that a licensed engineer perform periodic structural inspections of the City's sewer facilities, paying special attention to the integrity of connections between their structure and foundations, and other major structural connections. The response plan also recommends improvements to the telemetry and control system to provide early damage assessments.

b) Noise

- 1) **What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?**

Existing noise could not affect construction or operation of projects proposed in this plan.

- 2) **What types of levels of noise would be created by or associated with the project on a short-term or a long-term basis (for example: traffic, construction, operation, other)? Indicate what hours noise would come from the site.**

There will not be any noise involved with the adoption of this *Comprehensive Sewer System Plan*. The projects identified in this plan will have short term noise impacts associated with their construction. After they are put into operation, lift stations make minimal noise.

- 3) **Proposed measures to reduce or control noise impacts, if any:**

When projects are developed pursuant to this *Comprehensive Sewer System Plan*, the construction of those projects will meet all City codes including those regulating noise.

8. Land and Shoreline Use

- a. **What is the current use of the site and adjacent properties?**

Current land use within the planning area varies from commercial to agricultural to single family residential to undeveloped land.

- b. **Has the site been used for agriculture? If so, describe.**

Several portions of the service area have agricultural uses. Any projects identified within this document that may be in an area used for agriculture

will address this issue in the permit review of the individual project. All City codes, as well as any outside agency requirements, will be met as provided in the project permit review process.

c. Describe any structures on the site.

Structures vary throughout the planning area from residential to commercial, including single family, multi-family, commercial, retail, office, and light manufacturing

d. Will any structure be demolished? If so, what?

Demolition of structures before or during the construction of any of the identified projects is not anticipated. If a structure must be demolished, it will be addressed in the permit review of the individual project, if required. All City codes, as any outside agency requirements, will be met as provided in the project permit review process.

e. What is the current zoning classification of the site?

The *Comprehensive Sewer System Plan* covers all areas of the City and involves the zoning within the City code. In addition, the Plan covers areas in Pierce County and involves the zoning within the County Land Use Plan.

f. What is the current comprehensive plan designation of the site?

Bonney Lake's Comprehensive Plan is currently being updated to comply with the Growth Management Act.

g. If applicable, what is the current shoreline master program designation of the site?

Not applicable.

h. Has any part of the site been classified as an "environmentally sensitive" area? If so, specify.

No projects have been identified within documented "environmentally sensitive areas," which include areas such as wetlands and steep slopes. If projects must occur in these areas they will be addressed in the permit review of the individual project to determine the alternative with the least environmental impact. All City codes, as well as any outside agency requirements, will be met as provided in the project permit review process.

- i. **Approximately how many people would reside or work in the completed project?**

As of June 2008, the City's sewer system contains approximately 5,255 connections. This study addresses sewer needs for 20-year development conditions under current comprehensive land use plans. When the core area identified in this plan is developed to this 20-year level (under current zoning) and the necessary sewer system is in place, it will serve approximately 27,000 people.

- j. **Approximately how many people would the completed project displace?**

It is not anticipated that any projects identified within this plan would displace anyone within the planning area.

- k. **Proposed measures to avoid or reduce displacement impacts, if any:**

Does not apply.

- l. **Proposed measures to ensure the proposal is compatible with existing and projected land uses and plans, if any:**

The Public Works Department will ensure consistency with the Comprehensive Plan by updating or amending the sewer plan as needed. To ensure compatibility the plan will be reviewed by all applicable state agencies and adjacent utilities.

9. **Housing**

- a. **Approximately how many units would be provided, if any? Indicate whether high, middle, or low-income housing.**

No housing units will be provided as a result of the adoption of this *Comprehensive Sewer System Plan*. This plan addresses the development of the sewer system needs for land uses under the City's current zoning plan. Any housing units constructed concurrently or subsequently to projects identified in this study will conform to current building department requirements.

The specific projects identified within this plan will be designed to handle the capacity proposed in the zoning current at that time. No significant impact on housing will result from these projects.

- b. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low-income housing.**

No housing units are anticipated to be eliminated by either the adoption of this plan or any subsequent projects.

- c. Proposed measures to reduce or control housing impacts, if any:**

Neither the adoption of this plan or any of the projects talked about within this document will have any direct impacts on local or regional housing supply. None of the projects are of a scope that would require bringing large numbers of workers to the area for construction or operation.

10. Aesthetics

- a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed:**

Projects identified within this study will include lift stations. Lift stations could be small fiberglass enclosures (under 50 square feet), small permanent buildings (under 250 square feet) or larger concrete masonry unit (CMU) type buildings with metal roofs (2,000 square feet) structure. None of these structures are anticipated to be over 25 feet in height.

- b. What views in the immediate vicinity would be altered or obstructed?**

Views of project areas would be altered during construction due to clearing, excavation, and staging activities.

- c. Proposed measures to reduce or control aesthetic impacts, if any:**

If any projects identified within this study area have aesthetic impacts, they will be addressed in the permit review of that project. All City codes, as well as any outside agency requirements, will be met as provided in the project permit review process.

11. Light and Glare

- a. What type of light or glare will the proposal produce? What time of day would it mainly occur?**

No light or glare will be produced by the adoption of this plan. The projects

identified within this plan may create a temporary increase in ambient lighting during construction activity.

- b. Could light or glare from the finished project be a safety hazard or interfere with views?**

No.

- c. What existing off-site sources of light or glare may affect your proposal?**

None.

- d. Proposed measures to reduce or control light and glare impacts, if any:**

Lighting will be focused and directed to mitigate any potential lighting impacts. If any lighting over 300 watts is used, it will be shielded to prevent light and glare impacts on adjacent residents.

12. Recreation

- a. What designated and informal recreational opportunities are in the immediate vicinity?**

This study area has numerous recreational opportunities such as facilities belonging to the City of Bonney Lake (including parks, trails, and community centers), Pierce County (such as parks and trails), the School District (play fields) and private parties (docks).

- b. Would the proposed project displace any existing recreational uses? If so, describe.**

It is not anticipated that any permanent impacts to existing recreational usages will occur as a result of this plan. Some of the projects identified within this plan may have temporary impacts, such as access, during construction. There is also the potential for recreational enhancement such as trails that may be developed as part of some water projects.

- c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any:**

Neither the adoption of this plan nor the construction of the projects identified in the study will have any permanent impacts on recreational opportunities. Some of the projects may have temporary impacts during construction or the potential

for recreational enhancement. These items would be discussed in the permit review of the individual project. All City codes, as well as any outside agency requirements, will be met as provided in the project permit review process.

13. Historic and Cultural Preservation

- a. Are there any places or objects listed on, or proposed for, national, state, or local preservation registers known to be on or next to the site? If so, generally describe.**

No.

- b. Generally describe any landmarks or evidence of historic, archaeological, scientific, or cultural importance known to be on or next to the site.**

None are known.

- c. Proposed measures to reduce or control impacts, if any:**

Any measures that may be necessary to reduce or control impacts will be mitigated at the time individual projects are reviewed per permit requirements. If any evidence of historical, archaeological, scientific, or cultural importance is discovered, there will be a cessation of construction activity until a proper survey can be completed.

14. Transportation

- a. Identify public streets and highways serving the site, and describe proposed access to the existing street system. Show on site plans, if any:**

The transportation system within the service area consists of major transportation corridors, arterial, City streets, and local access roads. The major transportation corridors include State Route 410. The City's sewer system is planned and constructed, in most part, to utilize public street right-of-ways.

- b. Is site currently served by public transit? If not, what is the approximate distance to the nearest transit stop?**

Yes. Transit service is available throughout the service area.

- c. **How many spaces would the completed project have? How many would the project eliminate?**

Does not apply.

- d. **Will the proposal require any new roads or streets, or improvements to existing roads or streets, not including driveways? If so, generally describe (indicate whether public or private).**

The projects identified within this plan will not require any new roadways. Construction impacts may make it necessary to make temporary improvements to accommodate access or to restore an existing roadway.

- e. **Will the project use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.**

Does not apply.

- f. **How many vehicular trips per day would be generated by the completed project? If known, indicate when peak volumes would occur.**

There will be a temporary increase in vehicular trips during the construction of the projects identified in this plan.

- g. **Proposed measures to reduce or control transportation impacts, if any:**

If any of the projects identified within this document have impacts to transportation, the impacts will be discussed in the SEPA Checklist submitted for the project. All City codes, as well as any outside agency requirements, will be met as provided in the project permit review process.

15. Public Services

- a. **Would the project result in an increased need for public services (for example: fire protection, police protection, health care, schools, other)? If so, generally describe.**

No.

- b. **Proposed measures to reduce or control direct impact on public services, if any:**

If any of the projects identified within this document have impacts on public services, the impacts will be discussed in the SEPA Checklist submitted for that

projects. All City codes, as well as outside agency requirements, will be met as provided in the project permit review process.

16. Utilities

a. Circle utilities currently available at the site:

electricity, natural gas, water, refuse service, telephone, sanitary water, septic system, other: _____

Electricity, natural gas, water, refuse service, telephone, sanitary water, septic systems, and stormwater systems.

b. Describe the utilities that are proposed for the project, the utility providing the services, and the general construction activities on the site or in the immediate vicinity which might be needed.

Utilities required for lift stations and other facilities include electricity (Puget Sound Energy) and telephone (Qwest).

**D. SUPPLEMENTAL SHEET FOR NONPROJECT ACTIONS
(do not use this sheet for project actions)**

1. How would the proposal be likely to increase discharge to water; emissions to air; production, storage, or release of toxic or hazardous substances; or production of noise?

The proposal is a long-term plan to provide better sewer service to the City. Therefore, it would not directly result in any discharge to water, or in the production, storage, or release of toxic or hazardous substances or noise.

Proposed measures to avoid or reduce such increases are:

None.

2. How would the proposal be likely to affect plants, animals, fish or marine life?

The *Comprehensive Sewer System Plan* would not directly affect plants, animals, fish, or marine life.

Proposed measures to protect or conserve plants, animals, fish or marine life:

Does not apply.

3. How would the proposal be likely to deplete energy or natural resources?

Lift station operation requires the use of electricity.

Proposed measures to protect or conserve energy and natural resources are:

The intent of the proposal is to provide better management of energy and natural resources use by rationally projecting the City's needs and how those needs will be met.

4. How would the proposal be likely to use or affect environmentally sensitive areas or areas designated (or eligible or under study) for governmental protection; such as parks, wilderness, wild and scenic rivers, threatened or endangered species habitat, historical or cultural sites, wetlands, floodplains, or prime farmlands?

The City's *Comprehensive Sewer System Plan* was reviewed to ensure that this Plan would be compatible with environmentally sensitive areas.

Proposed measures to protect such resources or to avoid or reduce impacts are:

Does not apply.

5. **How would the proposal be likely to affect land and shoreline use, including whether it would allow or encourage land or shoreline uses incompatible with existing plan?**

The *Comprehensive Sewer System Plan* was reviewed for compatibility with existing and proposed land and shoreline use.

Proposed measures to avoid or reduce shoreline and land use impacts are:

Does not apply.

6. **How would the proposal be likely to increase demands on the transportation or public services and utilities?**

The *Comprehensive Sewer System Plan* would accommodate the increased demand on sewer service that the City has been and is expecting to continue experiencing.

Proposed measures to reduce or respond to such demand(s) are:

See above.

7. **Identify, if possible, whether the proposal may conflict with local, state, or federal laws or requirements for the protection of the environment.**

This *Comprehensive Sewer System Plan* is in accordance with all local, state, and federal law and requirements for the protection of the environment.

C. SIGNATURE

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.
